# Spring vs SpringBoot

- Springboot is layer on top of the Spring Framework.

Spring Framework

- It is divided into diff layers

    - Persistence: It is used to handle interaction with databases.

    - Service: Use the persistence layer's tech to meet the requirements. It will have all the classes and interfaces that will implement the service logic.

    - Presentation: Expose services to users using the controllers using for Example REST Api's.
